Upper Midwest Hazelnuts

More than a delicious ingredient.

Hazelnuts are a new crop for the Upper Midwest; low-maintenance and versatile. They grow in prime and poor soil and in hilly areas where other crops do not thrive.

Hazelnuts can help feed our local communities, provide new economic opportunities for farmers, and benefit the environment.

Environmental benefits of hazelnuts.

- **protect soil and water quality**
- **reduce soil erosion and nitrogen pollution**
- **add carbon to soil**
- **require little water**
